

# US Army, DOD, and DOE Proposal Requirements

---

November 2015

Principal Investigators:

US Army, Department of Defense, and Department of Energy grants require the completion and submission of an “Environmental Impact Questionnaire”. To ensure the University is complying with federal requirements, a signature is required showing compliance. The Director of Environmental Health and Safety will sign-off on grants utilizing hazardous agents provided the following actions have been completed:

- The questionnaire provides sufficient information to identify the hazards that are anticipated and the precautions that will be taken to minimize these hazards.
- A recent laboratory inspection was completed showing compliance with OSHA (health and safety) issues and USEPA (waste disposal) issues.
- All those actively working in a laboratory and the PI are current with their laboratory safety training.

The EH&S Director will **NOT** sign off on your grant unless these three issues are complete. Allow sufficient time should you need to resolve any of these issues.

Robert Passalugo

Manager, EH&S's Laboratory Safety Unit
