Mandatory COVID-19 Safety Training Module - Due ASAP
Sent June 23, 2020 through Blackboard

The University has launched an online COVID-19 Safety Training Module that all students, faculty and staff need to complete in preparation for safely returning/arriving to campus. It is designed to ensure that everyone clearly understands the operational and procedural changes the University has made in response to COVID-19, as well as explains the personal precautions that University community members are expected to take in order to prevent the spread of COVID-19, including adhering to face covering and social distancing guidelines.

You are receiving this as a notification that you should access and complete the training ASAP beginning July 6th in preparation for your arrival on campus.

You will access the training module through Blackboard beginning July 6, listed as “Return to Campus COVID-19 Safety Training.” It should take no more than 15 minutes to complete and can be taken on a computer, phone or tablet. Once you have reviewed all of the information, check the “completed” box at the end to verify your participation.

The COVID-19 Safety module needs to be completed before starting to use the Dr. ChatBot health screening app, but the training does not automatically enroll you in Dr. ChatBot—separate instructions for starting to use Dr. ChatBot will be forthcoming.

Questions? Please contact Environmental Health & Safety at questions@safety.rochester.edu. Again, for the safety of all University of Rochester community members, the COVID-19 Safety Training Module is mandatory.
